will • predictions

- 2 Read a British teenager's predictions about the future and answer the questions.

Transport in the future

I believe that transport in the future will be very different because there won't be any oil left and pollution will be a really serious problem. I think that people will use public transport more, and it will be cheaper and better. People will probably have personal transport, but the cars will be electric, which will be very expensive. So bicycles will definitely be very popular for short journeys.
